

JAV300 : Java EE EJB Business Component Development

Code : JAV300 **Duration :** 3 days **Category :** Java EE

Audience :

Java developers that want to learn how to develop of Java EE 6 EJB business components.

Prerequisites :

To participate in this course knowledge and experience with Java programming is required. Knowledge of Java Web development is beneficial for a proper understanding.

Realization :

The theory is explained using presentation slides and is interspersed with practical exercises. Demos are used to clarify the theory. All topics that are asked in the Java EE 6 Enterprise JavaBeans Developer Certified Expert Exam (1Z0-895) are discussed. The course material is in English.

Java EE Business Component Development with EJB's

Contents :

This course focuses on Enterprise JavaBeans, as specified in the EJB 3.x specification as part of the Java EE 6. Attention is paid to the different types of Enterprise Beans like Session Beans, Message Driven Beans and Singleton Beans. The Java Naming and Directory Interface (JNDI) is discussed and the simplification of how beans can be located and instantiated through injection. Attention is also paid to the lifecycle of the different types of beans and to concurrency issues. The important role that annotations play in Java EE and EJB's is discussed as well. Annotations do their work in many places such as in establishing links with resources and the realization of persistence. Also the use of the EJB Query Language and the implementation of Object Relational Mapping in EJB 3.x is part of the course schedule. Also the use of transactions in a Java EE 6 environment is considered. Attention is paid to the Java EE security architecture and the various authentication and authorization strategies. JMS and its use in combination with Message Driven Beans is also on the course program. And finally the focus is on best practices and design patterns in EJB technology.

Module 1 : Java EE Intro

- Java Editions
- Java EE
- Enterprise Applications
- Java EE Servers
- Web Components
- EJB Components
- JavaBean components
- Web Services
- Java EE API's
- EAR Files
- Deployment Descriptors
- Annotations
- Java EE 6

Module 2 : Enterprise Java Beans (EJB)

- EJB features
- Distributed Objects
- Session Beans
- Statefull and Stateless
- Architecture of an EJB
- EJB Object at work
- Client Access
- Remote versus Local Clients
- Web Service Clients
- Singleton Beans
- Singleton Concurrency Access
- Concurrency management strategy
- Session faade
- EJB Programming Model
- Life Cycle Session Beans
- Message Driven beans
- Life Cycle Message Driven Beans

Module 3 : JNDI and Injection

- Locate resources with JNDI
- JNDI Architecture
- JNDI InitialContext
- JNDI Naming Context
- EJB Environment
- Standard JNDI SubContexts
- Dependency Injection
- DataSource Injection
- Injection of EJB References
- Example EJB Injection

Module 4 : Java Persistence API

- Persistence API
- Entity Classes
- Entity Manager
- Persistence Context
- Entity Identity
- Entity Managers
- Entity Lifecycle
- Entity Relationships
- Persisting Objects
- Removing Objects
- Merging Objects
- Managing Identity

Module 5 : Entity Callbacks and Listeners

- Life Cycle Callback methods
- Entity Listeners
- Life Cycle Callback Rules
- Signature Life Cycle Callbacks
- Signature Entity Listeners
- @PrePersist and @PostPersist
- @PreRemove and @PostRemove
- @PreUpdate and @PostLoad
- Multiple Invocation Callbacks
- Invocation Order

Module 6 : Session Beans

- Session Beans Overview
- Stateless Session Beans
- Lifecycle Stateless Session Beans
- Event callbacks
- Asynchronous communication
- Singleton session bean
- Singleton concurrency access
- Stateful Session Beans
- Servicing Remove
- Passivating and Activating
- Cart Session Bean
- Remote Business Interface
- Cart Session Bean Class
- Life Cycle Callback Methods
- Calling Business Methods
- Remove method

Module 7 : Message Driven Beans

- Motivation Message Driven Beans
- Messaging Characteristics
- Message Oriented Middleware
- Publish and Subscribe
- Point tot Point
- What is JMS?
- Message types
- Creating and Receiving Messages
- Integrating JMS with EJB
- Message Driven Beans
- MessageListeners
- onMessage method

Module 8 : Timer Service

- Timer Service
- Scheduling Timers
- Creating Timers
- Timeout method rules
- Canceling and Saving Timers
- Timer Usages
- Timer Service interface
- Timer interface
- Timer handle interface

Module 9 : Interceptors

- Interceptor
- Interceptor Classes
- @AroundInvoke
- Example Interceptor
- Interceptor Lifecycle
- Interceptor Types
- Default Interceptors
- Exclude Interceptors

Module 10 : Transactions

Transactions
Demarcating Boundaries
Container Managed
Bean Managed
Client Managed
Transaction Attributes
SessionSynchronization
Before Completion
After Completion

Module 13 : EJB Best Practices

Define best practices
Benefits of EJB best practices
Patterns to Java EE application design
Implements effective exception handling
EJB Design Patterns

Optional Appendix : JMX

What is JMX?
JMX API
JMX Goal
Managed Beans
MBean flavors
JMX Architecture
Java SE 5.0 Mbeans
Naming MBeans
MBean Server
Registering Mbeans
Manipulating MBeans
Notifications
Notification Listeners

Module 11 : Security

Java EE security architecture
Java EE and EJB Security
Security Overview
Programmatic Security
Java EE authorization strategies
Declarative Security
Security Functions
Using Programmatic Security
Method Permissions
DeclareRoles
ejb-role-ref
role-link

Module 14 : Clustering

What is clustering?
Thin Client Clustering
Thick Client Clustering
JBoss all configuration
Clustering Stack
What is JGroups
What is JCache
HA-JNDI
HA-Smart Proxies
SLSBs
SFSBs
HTTP session replication
Entity beans
EJB3
POJO Clustering

Module 12 : EJB and Web Services

What is a Web Service?
RPC Example
Structure SOAP Message
What is WSDL
Stateless Session Bean Endpoint
JAX-WS
Publishing an Endpoint
Web Service Annotations

Optional Appendix : Annotations

What are annotations?
Pre-Java 5 annotations
Why annotations
Defining annotation types
Using annotations
Kinds of annotations
Marker annotations
Single value annotations
Normal annotations
Meta-Annotations
