

JAV333 : Using Maven

Code :

JAV333

Duration :

2 days

Category :

Built by:
maven

Tooling

Audience :

This course is intended for developers who use Maven for dependency management and for the automatic building and deployment of projects.

Prerequisites :

To participate in this course knowledge of and experience with Java and XML is required.

Realization :

The theory is discussed on the basis of the presentation slides and is interspersed with exercises. Demo projects in Maven are used to clarify the concepts. The course material is in English. The course focuses on Maven version 2.

Using Maven

Contents :

In this course participants learn the skills and acquire the knowledge needed to use Maven as an automated build and dependency management tool. First an overview of the problems in project and dependency management is given and the operation of Maven and role of Maven repositories is explained. Next it is discussed how Maven relates to the automatic build tool Ant. Then the directory structure of Maven projects and the standard life cycle is addressed. Maven projects can be created on the basis of predefined archetypes in which a given project structure is already present from the start. Attention is paid to a number of archetypes and to the role of goals and Maven plugins. Also the Project Object Model (POM) with pom.xml is discussed. The significance of the main entries in it such as Group, Artifact, and Version, are treated and attention is also paid to a complex structure with multiple pom files and pom inheritance. Finally the role of Maven when performing tests, continuous integration and release management with Bamboo are examined.

Module 1 : Maven Intro

- An Introduction to Maven
- Key Features of Maven
- History of Maven
- Alternatives to Maven
- Comparing Maven and Ant
- Maven Directory
- Maven Settings (Local and Global)
- Local Maven Repository
- Running Maven
- Maven Options

Module 2 : Core Concepts

- Maven Directory Structure
- Standard Maven Lifecycle
- Key Lifecycle Phases
- Customizing the Lifecycle
- Lifecycle Overview
- Default Lifecycle
- Site Lifecycle
- Package-specific Lifecycles

Module 3 : Maven Plugins and Goals

- Maven Coordinates
- Dependency Management
- Maven Repositories
- Maven Archetypes
- Plugins
- Maven Goals

Modules 4 : Project and Dependencies

- The Project Object Model (POM)
- The Simplest POM
- POM Components
- Project Coordinates
- GAV (Group, Artifact, Version)
- Project Versions
- Snapshot Versions

Module 5 : Dependencies

- Dependency Scope
- Optional Dependencies
- Version Ranges
- Transitive Dependencies
- Visualizing Dependencies
- Dependency Conflicts
- Excluding Transitive Dependencies

Module 6 : Inheritance and Aggregation

- POM Inheritance
- The Super POM
- Inherited Behavior
- The Effective POM
- Multi- Projects
- Directory Structure
- Container Projects
- POM Aggregation

Module 7 : Custom Builds

- Properties and Profiles
- Variables
- POM Variables
- settings.xml properties
- Java System properties
- Environment variables
- User-defined properties
- Filtering Resources
- Build Profiles
- Project Configuration with Profiles
- Profile Activation
- Maven Repositories
- Repository Structure
- Central Repository
- Other Remote Repositories
- Local Repository
- Site Generation and Reporting

Module 8 : Site Generation

- Standardized Environment
- Explicit Use of Plugin Versions
- The Enforcer Plugin
- Maven Site as Collaboration Tool
- The Site Lifecycle
- Default Site Layout
- Creating a Site Project
- Organizing Your Site
- Adding Site Content
- Site Reporting with Maven
- Technical Documentation
- Browsable Source Code
- Displaying Test Results
- Code Quality Metrics

Module 9 : Web Development

- Using the Maven Jetty Plugin
- Developing Web Applications with Maven
- Repository Management
- What is an Enterprise Repository?
- Nexus Repositories and Security
- Deploying to Nexus with Maven
- Managing Maven Settings with Nexus
- Configuring Procurement in Nexus
- Performing a Staged Release

Module 10 : Release Management

Release Management
The Maven Release Plugin
Developer Release Workflow
Integration with Source Control
Example Using Subversion
What is Continuous Integration?
Benefits of Continuous Integration
Comparisons of Bamboo to other CI
Servers/Products
Setting Up a Maven Job in Bamboo
Monitoring Bamboo Builds
Demonstration of Bamboo
