

# Java Data Access with JPA

#### **Audience Course Java Data Access**

Experienced Java developers who want to learn how to use the Java Persistence API for accessing data in databases.

#### Prerequisites Java Data Access with Persistence API

Experience with Java programming and object orientation is required to participate in this course. Knowledge of database structures and SQL is beneficial for a good understanding.

#### **Realization Training Course Java Data Access**

The concepts are treated on the basis of presentation slides and demos. The theory is interspersed with exercises. All topics in the Java EE Persistence API Developer Certified Expert Exam (1Z0-898) will be discussed. The course material is in English. The course times are from 9.30 up and to 16.30.

#### **Certification Java Data Access with Persistence API**

Participants receive an official certificate Java Data Access with Persistence API after successful completion of the course.

### **Content Course Java Data Access with JPA**

In the course Java Data Access with JPA Object Relational Mapping with the Java Persistence API 2.x is on the agenda.

#### **JPA Architecture**

After an overview of the data access capabilities in Java, including JDBC, and the challenge they face, the basic concepts and architecture of the JPA is explained. The role of the Entity Manager and the persistence.xml configuration file is discussed.

#### Entities

The next topic covers the concept of a JPA Entity, the lifecycle of Entities and how Entity classes are mapped to database tables. Also the various states Entities can have in relation to the database such as new, persistent, detached and removed are discussed in this respect as is the concept of merging.

#### Annotations

Furthermore the use of annotations and XML mapping files and the role the various properties and attributes play is explained.

#### **JPA Queries**

The various key generation strategies are discussed as well as the mapping of association relationships and the mapping of inheritance relationships between Entities. Next the possibilities of the JPA Query language, JPQL, are covered and the uses of JPA criteria and native SQL queries.

#### Callbacks

The function and operation of Entity callbacks that are called immediately before and after the execution of a persistence operation is explained and the alternative use of Entity Listener classes as well.

#### Interceptors

Part of the course program is also the treatment of interceptors which are used for crosscutting concerns like logging and security. Finally, attention is paid to the use of JPA in a Java EE application, how to interact with EJBs and the method of packaging JPA entities.

#### Transactions

Finally JPA transactions are addressed in both a desktop environment and a Java EE environment.

# Modules Course Java Data Access with JPA

Module 1 : Intro Java Persistence	Module 2 : Persistence API	Module 3 : Mapping Persistent Objects
Java Persistence	Object Relational Mapping	Mapping Annotations
Traditional Persistence	Java Persistence API	Table Annotation
Transparent Persistence	JPA Versions	UniqueConstraint Annotation
Persistence Technologies	Entity Classes	Column Annotation
Direct File I/O	Entity Manager	Id Annotation
Serialization	Persistence Context	IdClass Annotation
Java Database Connectivity	Entity Identity	GeneratedValue Annotation
JDBC Architecture	Entity Lifecycle	Version Annotation
Executing Statements	Entity Relationships	Basic Annotation
Retrieving Results	Persisting Objects	Lob Annotation
JDBC Drivers	Removing Objects	Temporal Annotation
JDBC URL's	Merging Objects	Enumerated Annotation
Problems with JDBC	Managing Identity	Transient Annotation
Module 4 : Mapping Relationships	Module 5 : Mapping Inheritance	Module 6 : JPA Query Language
Entity Relationship types	Mapping Class Hierarchies	Java Persistence QL
Bidirectional OneToOne	Mapping Strategies	JPA QL Characteristics
Bidirectional ManyToOne	Single Table Inheritance	Query Interface
Bidirectional OneToMany	DiscriminatorColumn Settings	Projections
Bidirectional ManyToMany	Single Table per Hierarchy	Subqueries
Unidirectional OneToOne	Single Table Mapping Features	Joins
Unidirectional ManyToOne	Joined Subclass Strategy	Update and Delete Queries
Unidirectional OneToMany	InheritanceType Joined	Dynamic and Static Queries
Unidirectional ManyToMany	Joined Subclass Per Hierarchy	Criteria API
Cascading Persist	Table per Concrete Class	Query Error Detection
Cascading Merge	Abstract Entity Classes	CriteriaBuilder
Cascading Remove	Mapped Superclasses	Metamodel in JPA
Module 7 : Callbacks and Listeners	Module 8 : Interceptors	Module 9 : Java EE integration
Life Cycle Callback methods	Interceptor Invocation Model	Enterprise Java Beans
Entity Listeners	@Interceptor Annotation	Sessions Beans
Life Cycle Callback Rules	Interceptor Classes	Statefull and Stateless
Signature Life Cycle Callbacks	Invocation Context	JNDI lookups
Signature Entity Listeners	@AroundInvoke	EJB injection
@PrePersist and @PostPersist	Interceptor Lifecycle	Transaction-Scoped Persistence Context
@PreRemove and @PostRemove	Interceptor Types	Extended Persistence Context
@PreUpdate and @PostLoad	Default and Exclude Interceptors	Persistence Unit
Multiple Invocation Callbacks	PostConstruct or PostActivate	Packaging in EAR files
Invocation Order	PreDestroy and PrePassivate	Deployment Descriptors
Module 10 : Transactions		·
Data Integrity		
Transaction Control		
Begin, Commit and Rollback		
Demarcating Boundaries		
Container Managed		
Bean Managed	1	
Olivert Marsanad		
Client Managed		
Transaction Attributes		
Transaction Attributes SessionSynchronization		
Transaction Attributes SessionSynchronization JTA Transactions		
Transaction Attributes SessionSynchronization JTA Transactions Before Completion
