Duration: 2 days   **Price: € 1299**

Open Schedule

Joomla Web Development

Content Course Joomla Web Development

In the course Joomla Web Development, participants learn to use the Joomla Content Management System, CMS, to set up a complete web site. The course is based on the latest version of Joomla. Programming knowledge is no required to do this.

Joomla Intro

It is discussed how Joomla components are put together and how they are linked. Attention is paid to components such as sections, articles, banners, ads, images and categories.

Joomla Menu's

Also addressed is how menus are linked in Joomla and how items and descriptions are added.

Joomla Extensions

Joomla can be extended with extensions that are available in many places and that can extend the functionality. A number of these extensions will be demonstrated. Some are free for others you will need a license.

Templates and Modules

Further templates that give a certain structure to Joomla components are treated and application modules are discussed as well.

Joomla Configuration

Finally there is attention for all kind of issues related to the configuration of Joomla. After completing this course participants will be able to build a web site with Joomla all by themselves.
