Content Course Scrum Master

In the course Scrum Master participants learn to become a professional and officially recognized Scrum Master in two days. A Scrum Master ensures that a Scrum project is managed in the right direction. The Scrum Master is the facilitator of a good process.

Scrum Intro

The course Scrum Master starts with a discussion of the most important features of the Scrum software process. The role of the Scrum Master, which is of great importance for the success of Scrum, is discussed.

Scrum Process

Then the roles, tools and meetings of the Scrum process are covered. It is explained how the Product Owner is responsible for the content of the project being worked on while the Scrum Master monitors the process.

Scrum Teams

The role of the Scrum Master in relation to the team is also treated. The training covers the tools available to a Scrum Master for guiding self-managing teams.

Scrum Planning

Next attention is paid to how the Scrum Master ensures that the Scrum sprint planning meeting really takes place. During the Scrum sprint planning, where the entire project team is present, the work that has to be done in a sprint is planned. The Scrum Master ensures that the goal is clear to everyone.

Scrum Challenge

The implementation of the Scrum process can have far-reaching consequences for organizations and difficulties can arise as a result of which Scrum does not fully shows all its benefits. During the training you will learn to apply Scrum based on a practical case and you will learn how to coach a team in applying Scrum.

Scrum Certification

After the training you can take a Scrum.org exam online. This allows you to become a Professional Scrum Master. The exam is not included in the training and is optional.
