Content Course WordPress Fundamentals

In the course WordPress Fundamentals you will learn how to build and manage a website with WordPress. WordPress is one of the most widely used Content Management Systems and many features of WordPress are free to use.

WordPress Intro

The course starts with installing WordPress. Then the different parts of WordPress are discussed such as the dashboard, pages, posts, menus and widgets.

WordPress Settings

Next the course will discuss the settings you can apply in WordPress. This includes the SEO (Search Engine Optimization) settings, the dimensions of images and page templates.

Create Pages

Then attention is paid to creating pages and posts. The different blocks that make up a page are discussed and headings, links, lists, columns and paragraphs are treated. The insertion of videos and images from the media library is also on the program of the course WordPress Fundamentals.

Menus

Then it's time for the coverage of menus, explaining where to place menus and how to link them to pages and external locations.

Widgets

In the course it is also explained what widgets are, how they can be customized and where they can be placed. The standard widgets and the options for expanding widgets are also discussed.

Themes

Attention is also paid to themes with which a WordPress website can be provided with its own corporate identity. The criteria for selecting a theme are treated as well as further adjustments with the customizer.

Plugins

Finally WordPress plugins are discussed. With plugins all kinds of useful functionality can be added to the WordPress website, such as making a backup.
